Career Objective

I am seeking a Graduate Software Engineer role where I can continue developing backend and full stack systems using Java and Python. I enjoy solving structured problems, building reliable applications, and working on projects involving algorithms, data processing, and user interaction. I am interested in collaborative engineering environments where I can continue building practical software development experience.

Technical Skills

Programming Languages

Proficient: Java, Python, HTML, CSS, JavaScript, Vue.js

Familiar With

SQL, REST APIs, React, Brython

Testing & Development

JUnit, Git, GitHub, Agile Development, Figma

Concepts

Algorithms, Data Structures, Unit Testing, Debugging, Responsive Design

Project Experience

Transport Route Planning Application

Tools: Java

- Developed a transport route planning application as part of a university software project.
 - Designed routing logic and processed structured transport data to calculate optimal routes.
 - Implemented DFS, BFS, and A* algorithms to support pathfinding and route calculation.
 - Applied data structures and testing to improve reliability and system behaviour.
-

Java Maze Game Project

Tools: Java, JUnit, Git

- Contributed to a team-based software engineering project to build a 2D maze game.
 - Developed and debugged gameplay features alongside other team members.
 - Designed and implemented unit tests using JUnit to improve reliability.
 - Built a simple fuzz testing tool to repeatedly execute the application and identify unexpected issues.
-

Event Management Web Application

Tools: Vue.js, JavaScript, HTML, CSS

- Built a responsive web application that supports event creation, user authentication, and RSVP management.
 - Developed frontend functionality and handled user interactions and validation.
 - Integrated REST APIs and database interactions to support application behaviour.
 - Improved usability through responsive layouts and error handling.
-

Handwriting Recognition Prototype

Tools: Python, Machine Learning

- Built a prototype system to classify handwritten characters from image datasets.
- Prepared and processed datasets for training and evaluation.
- Implemented and compared CNN and Vision Transformer approaches.
- Evaluated model outputs to understand differences in performance and behaviour.

Work Experience

Coding & Robotics Tutor — Scots College, Wellington

2024 – Present

- Deliver coding and robotics sessions to secondary school students using Python and robotics platforms.
- Support students with debugging, structured problem solving, and technical exercises.
- Guide students participating in RoboCup and encourage collaborative learning.
- Adapt teaching approaches to different learning styles and explain technical concepts clearly.

Mobile Phone & Appliance Repair Technician — Wellington

Dec 2025 – Feb 2026

- Diagnosed and repaired mobile phones, computers, and household appliances.
- Identified software and hardware issues and completed device testing before return.
- Updated operating systems, transferred customer data, and performed quality checks.
- Communicated repair processes clearly and helped customers understand technical issues.

Front-of-House Team Member — Wellington

2021 – 2025

Sushiya (2023 – 2025)

One Sushi (2022 – 2023)

Dynasty Restaurant (2021 – mid 2022)

- Delivered customer service in fast-paced hospitality environments.
- Managed customer orders, payments, bookings, and enquiries.

- Worked closely with team members during busy service periods.
 - Developed communication, teamwork, and problem-solving skills through direct customer interaction.
-

Education

Bachelor of Science — Computer Science

Minor in Artificial Intelligence

Victoria University of Wellington | 2023 – 2025

Relevant study areas:

- Software Engineering
 - Algorithms & Data Structures
 - Databases
 - Machine Learning
 - Network Systems
 - Human Computer Interaction
-

Certifications

- AWS Certified Cloud Practitioner — 2026
 - VUW Git & GitHub Workshop — 2024
-

Referees

Available on request.
