Career Objective

I am seeking a Graduate Software Engineer role. I have experience building applications using Java and Python. I am interested in backend development and enjoy using logic to build structured systems. I also have an interest in user interface design and improving usability. I enjoy working in a team and want to keep building my skills in a collaborative environment.

Education

Bachelor of Science — Computer Science
Minor in Artificial Intelligence
Victoria University of Wellington | 2023 – 2025

Certifications

AWS Certified Cloud Practitioner — 2026
VUW Git & GitHub Workshop — 2024

Technical Skills

Proficient: Java, Python, HTML, CSS, Vue.js

Familiar with: SQL, Brython

Testing: JUnit, Test Case Design

Tools: Git, GitHub, Figma

Core Skills

Problem Solving & Systems Thinking

Built a transport route planning system that allows users to find optimal routes. Completed this as part of a university project. Was responsible for designing the routing logic. Used path-finding algorithms including DFS, BFS, and A* to compute routes and handle transport data.

Software Testing & Quality

Improved the reliability of a Java-based game by finding and fixing bugs early. Worked on this in a team software engineering project. Was responsible for testing core features. Designed test cases and wrote unit tests using JUnit. Built a simple fuzz testing tool to run the game repeatedly and catch unexpected errors.

Collaboration & Communication

Supported team progress on a Java-based game project by working closely with others. Completed this as part of a team software engineering project. Was responsible for contributing to development and debugging. Used Git for version control, shared updates, and worked with teammates to resolve issues.

User Research & UX Design

Improved the usability of a public transport app by identifying accessibility issues. Worked on this as part of a team UX design project. Was responsible for user research and interface design. Conducted user interviews, created personas, and built wireframes and high-fidelity prototypes using Figma

User Interface Design

Built a web application that allows users to log in, manage events, and RSVP. Worked on this as part of a web development project. Was responsible for building the frontend and user interface. Implemented features including authentication, event scheduling, and RSVP functionality using Vue.js, HTML, and CSS.

Transport Map Application

Tools: Java

- Built an application that allows users to find optimal transport routes between locations.
- Developed this as part of a university project focused on transport systems.
- Designed and implemented routing logic to handle pathfinding between stops.

- Used algorithms including DFS, BFS, and A* to compute routes.
 - Processed transport data to support route calculation and system behaviour.
-

Java Game Development Project

Tools: Java, JUnit, Git

- Built a 2D pixel-based maze game with core gameplay and player interaction.
 - Worked on this as part of a team software engineering project using Git for version control.
 - Contributed to game logic and debugging to ensure correct behaviour.
 - Wrote unit tests using JUnit to detect bugs during development.
 - Built a simple fuzz testing tool to run the game repeatedly and catch unexpected errors.
-

Reel Local Cinema Club Website

Tools: Vue.js, HTML, CSS

- Built a web application that allows users to log in, manage events, and RSVP.
 - Developed the frontend using Vue.js, focusing on user interaction and interface behaviour.
 - Implemented features including authentication, event scheduling, and RSVP functionality.
 - Handled user input and updated the interface based on user actions.
 - Added input validation to handle user input and prevent errors.
-

More projects can be found on my GitHub and portfolio website.

Work Experience

Coding & Robotics Tutor – Scots College [2024 – Present]

- Improved students' understanding of programming by teaching Python and

problem solving.

- Delivered coding and robotics sessions to secondary school students.
- Guided students in preparing for and participating in RobotCup competitions.
- Explained technical concepts clearly and supported students with debugging and exercises.
- Adapted teaching approaches to different skill levels to help students build confidence.

Front of House Staff – Sushiya [2023 – 2025]

- Provided good customer service by communicating clearly and handling customer requests.
 - Worked with the team during busy periods to keep service running smoothly.
 - Resolved customer issues and handled requests in a fast-paced environment.
 - Managed payments and handled cash accurately at the counter.
