WHO AM I?

I started coding at 16 while at college and have kept building my skills ever since, through university projects and hands-on software development. To showcase my work, I built an interactive 3D portfolio website (top right of this page).
I pay attention to detail and enjoy turning abstract ideas into practical solutions. I'm also comfortable explaining technical features in simple language, using everyday examples and analogies to help others understand how they work.
I am currently seeking a junior / intermediate software engineering opportunity where I can further develop my skills and contribute to acollaborative team.

[JS,TS] React, Vue 3, Next.js
[PHP] Laravel, Inertia.js
[C#, .NET] ASP.NET Core, EF Core
[Python] Machine Learning, NLP
[Java] Springboot, JUnit
[DB] PostgreSQL, SQLite, Supabase
[Cloud] Docker, AWS, Vercel
[CI/CD] GitHub Actions, Jenkins
[AI] Codex, OpenAI API, AI SDK

VS Code	IntelliJ	Git	GitHub	PostgreSQL
Laravel	Docker	Codex	AWS	Vercel

EXPERIENCE

01/2026 – Present

Full Stack Developer — **Ocular**

Work closely with the team lead and colleagues to turn reporting requirements into secure, practical application features.

Reporting & Data Export API

• Worked with business analysts to gather ideas from stakeholders and clarify what they needed from the reporting tools.

• Discussed technical options with the team lead and helped turn a Power BI demo into a working data-export feature.

• Simplified reporting integrations with colleagues, contributing to an estimated 200% improvement in integration speed.

Team MVP — JobTrack

• Led development of the JobTrack MVP, keeping the team focused on building and testing the core features within a tight timeframe.

• Planned how people would use the application with colleagues, testing ideas and refining the design through team feedback.

• Used JobTrack in my own job search to identify areas for improvement. Automated job-detail importing from URLs, reducing recording time from 1–2 minutes to under 30 seconds per application.

• Integrated AI-assisted job matching to help users identify relevant experience and gaps when reviewing a job description.

View MVP: Open https://jobtrack-fullstack-ashy.vercel.app.

`Laravel / Vue 3 / TypeScript / PostgreSQL / Power BI / Next.js / Supabase / OpenAI API / Docker`

11/2024 – Present

Coding and Robotics Tutor **Matamoe**

During my studies, I began tutoring part-time, putting my technical knowledge into practice and learning to explain ideas clearly to students with different levels of experience.

• Deliver 2–3 sessions per week to classes of over 15 students, adapting explanations and guidance to different learning needs.

• Encourage teamwork through coding activities and RoboCup preparation, helping students share ideas, divide tasks and solve problems together.

• Build students' confidence through patient guidance and helpful feedback, encouraging them to ask questions and work things out independently.

• Learned to listen more carefully and balance individual support with group activities, becoming more patient and confident when working with people of different abilities.

2025 – 2026

PC and Mobile Phone Repair Technician **UR Tech**

During my studies, I worked part-time repairing computers and phones. The role taught me how to explain what was wrong and what needed fixing in a way customers could easily understand.

• Completed 7–8 screen and battery replacements on busy days, checking device functionality before returning repairs.

• Worked with customers to resolve concerns and post-repair issues through calm communication and practical troubleshooting, earning positive feedback and repeat business.

• Contributed to an approximately 37% increase in sales, alongside day-to-day repairs and customer support.

• Diagnosed device faults and explained technical issues clearly to non-technical customers, outlining repair options with estimated costs and turnaround times.

EDUCATION

2023-2025

Bachelor of Science **Victoria University of Wellington**

Major in Computer Science; minor in Artificial Intelligence.

Selected course results:
Foundations of Application Development (A+);
Programming for the Natural and Social Sciences (A+);
User Experience Engineering (A-).

2018-2022

High School **Wellington College**

NCEA Level 1,2,3

LANGUAGES

English
Mandarin-Chinese

HOBBIES

Outside work, I enjoy snowboarding, hunting and playing board games with friends. I like spending time outdoors, while board games appeal to my interest in strategy, teamwork and friendly competition. I also enjoy exploring new technologies on GitHub and experimenting with small personal projects, especially AI tools and interactive web experiences.
