PROFESSIONAL PROFILE

Computer Science graduate and Full Stack Developer Intern with a Minor in Artificial Intelligence. Professional experience building multi-tenant applications with Vue 3, TypeScript, Inertia.js, PHP, Laravel and PostgreSQL, supported by deployed projects using React, Next.js, C#, ASP.NET Core, Node.js, Python and Supabase. Strong foundation in APIs, database design, automated testing, debugging, Git workflows, CI/CD, cloud deployment, technical communication and customer-focused problem solving.

TECHNICAL SKILLS

Programming Languages: Python, PHP, TypeScript, JavaScript, C#, Java, SQL, HTML5 and CSS3

Application Development: Laravel, Vue 3, Inertia.js, React, Next.js, ASP.NET Core, Node.js, Express, REST APIs, responsive web applications and Progressive Web Apps

Data and Integration: PostgreSQL, SQLite, Supabase, Eloquent ORM, Entity Framework Core, Prisma ORM, OData, Power BI fundamentals, multi-tenancy and service integration

Testing and Engineering: Pest, xUnit, Vitest, React Testing Library, JUnit, fuzz testing, unit and integration testing, validation, debugging, object-oriented programming and code review

Cloud and Delivery: Git, GitHub, GitHub Actions, CI/CD, Docker, Laravel Sail, Vercel, Render, Agile development and AWS cloud fundamentals

EDUCATION

Bachelor of Science in Computer Science, Minor in Artificial Intelligence | Victoria University of Wellington | 2023 - 2025

Relevant study: Software Engineering, Algorithms and Data Structures, Databases, Machine Learning, Network Systems and Human-Computer Interaction

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern | *Ocular* | Jul 2026 - Present

- Develop multi-tenant application features using Vue 3, TypeScript, Inertia.js, PHP, Laravel, Eloquent ORM and PostgreSQL.
- Work across frontend components, backend business logic, REST APIs, validation, database migrations, authentication and authorisation, search, storage, email, queues and real-time features.
- Contribute within Docker and Laravel Sail workflows using Git-based development, structured debugging and maintainable implementation practices.

Coding and Robotics Tutor | *Scots College* | Jan 2024 - Present

- Teach Python, coding and robotics to students with varied experience, adapting technical explanations and supporting structured problem solving.
- Guide debugging, testing and RoboCup preparation while strengthening communication, mentoring, planning and teamwork skills.

PC and Mobile Phone Repair Technician | *UR Tech* | Dec 2025 - Feb 2026

- Diagnosed hardware, software and operating-system faults across computers, mobile phones and electronic devices; completed setup, data transfers, updates and quality checks.
- Investigated user-reported issues methodically and explained technical problems and reliable solutions clearly to customers.

SELECTED PROJECTS

Dependency Map | Laravel 13, Vue 3, TypeScript, Inertia.js, PostgreSQL, Docker | [GitHub](#)

- Built an authenticated dependency-graph workspace with CRUD workflows for projects, nodes and relationships, scoped resource ownership and persistent graph layouts.
- Added 31 domain-focused feature tests and a GitHub Actions CI pipeline covering formatting, linting, static type analysis, Pest tests and PostgreSQL integration.

FitQuest | React, TypeScript, C#, ASP.NET Core, Entity Framework Core, SQLite | [GitHub](#) | [Live](#)

- Developed and deployed a gamified fitness tracker with quest CRUD, XP and level progression, streaks, achievements, responsive navigation and animated completion feedback.
- Implemented frontend and backend tests, request validation, API rate limiting, CORS controls and Zustand state management across a React frontend and ASP.NET Core API.

JobTrack Fullstack | Next.js, Supabase, PostgreSQL, Vercel AI SDK, OpenAI API, Zod | [GitHub](#) | [Live](#)

- Built and deployed an application tracker with authenticated workflows, job-page importing, search and filtering, follow-up timing and private cross-device CV storage.
- Added an AI Match Agent using the Vercel AI SDK, OpenAI Responses API and Zod to produce structured fit reports grounded in reviewed CV evidence.

Kiwi Supplement Watch | React, Vite, JavaScript, GitHub Actions, Vercel | [GitHub](#) | [Live](#)

- Built a New Zealand supplement price-monitoring dashboard with live retailer collectors, source-health reporting, price history and stale-data fallback when sources are unavailable or rate-limited.
- Automated daily data collection, production builds, smoke testing, dataset commits and deployment through GitHub Actions, with runtime JSON loading for up to 1,200 selected rows.

Machine Learning Classification Projects | Python, Machine Learning, NLP, CNN, Vision Transformer | [GitHub](#)

- Prepared image data and compared CNN and Vision Transformer models for handwritten character recognition across 62 classes, using error analysis to guide preprocessing and training decisions.
- Compared traditional machine learning, CNN and transformer approaches for AG News text classification; the strongest model achieved approximately 94.7% test accuracy.

Personal Portfolio and 3D Guided Tour | React, Vite, JavaScript, Three.js, React Three Fiber, GitHub Pages | [GitHub](#) | [Live](#)

- Designed and deployed a responsive portfolio with route-based sections for experience, selected projects, technical skills and an in-browser CV viewer.
- Built an optional lazy-loaded 3D guided tour with animated project scenes, WebGL capability checks, reduced-motion support and a static fallback for less capable devices.

CERTIFICATION AND ADDITIONAL INFORMATION

Certification: AWS Certified Cloud Practitioner, 2026

Professional Development: VUW Git and GitHub Workshop, 2024

Work Eligibility: Eligible to work in New Zealand and open to relocation for suitable opportunities

Driver Licence: Full New Zealand Driver Licence
